Jul 14, 2020 By Devty Q: I have very large T-SQL I have very large T-SQL, which after a few years of development resulted from 2 mistakes: too simple SQL which did the job, and less developers who understood the SQL Now I want to write a lot of data transfer and place some of the data in an SQL table (maybe the full table?) after the transfer. How should I organize the SQL? A: The normal approach is to create a table in the new DB to hold your data. If the data is frequently updated just drop it from the old DB and recreate it in the new DB. If the data will only be read and never updated then include a foreign key to the original table. If you plan to occasionally re-migrate the data then create a view in the new DB that combines the tables. It's a pretty easy process for a developer to do this too, as the developer has full access to the data from the server, you would 570a42141b
